

MicroData Software, Inc.

CAMEO™ 2.0

“...employers could be held liable for abuse or harassment caused via e-mail if they are unable to show that systems had been introduced to prevent such harassment occurring”¹

“Internal E-mails put firms in danger of libel lawsuits”²

“Chevron has been forced to pay out \$2.2m to four female employees who claimed sexual harassment after receiving abusive e-mails at work.”¹

“Norwich Union last year paid \$675,000 in an out-of-court settlement to Western Provident after employees sent defamatory e-mails about a rival firm.”¹

E-mail is a powerful tool...

...so why would companies fail to exercise control over e-mail like any other corporate asset? Until now, tools for monitoring and controlling the corporate e-mail system have only been partial solutions, difficult to set up and administer, or simply cost prohibitive. MicroData's third generation software gives management a set of comprehensive, easy-to-use, and powerful tools for monitoring and controlling the corporate e-mail system.

The Corporate E-mail Auditing Tool

How can you be sure that your e-mail system is being used the way it was intended? What are your employees saying in their e-mail? What are they spending their time reading? Are you taking steps to manage your e-mail content?

You should.

CAMEO 2.0 is newest version of the first commercial management tool for auditing *both* Internet and Internal (desk-to-desk) e-mail in Exchange organizations. CAMEO 2.0 works as your agent, scanning thousands of messages per hour with little impact on your Exchange e-mail systems. Now managers can review all e-mail and get the information they need to enforce corporate e-mail usage policies, stop harassing content, and assist in keeping internal information internal.

CAMEO 2.0 silently, discretely, and continuously scans e-mail content...

- to ensure it meets company policies;
- to check that confidential information isn't being communicated;
- to review incoming e-mail and automatically route the message based upon content;
- to help ensure that personnel policies are being followed;
- to catch spam messages;
- and much more.

CAMEO 2.0 analyzes all e-mail messages reviewing them for matches with content that you specify and forwarding matched messages to the attention of anyone you designate for review or action.

CAMEO 2.0 requires no additional servers or hardware and can be run from any workstation (Windows NT/2000). Installation is quick and simple. CAMEO doesn't install into or on your Exchange servers, so it's 100% safe and can be set up and running in minutes! CAMEO 2.0 offers a simple, safe, and economical solution for companies to protect themselves against e-mail abuse without having to make changes to their existing Exchange system. Even the smallest network can easily afford CAMEO 2.0.

CAMEO™ 2.0 Technical Information

Microsoft Exchange uses a series of connectors and internal operations to facilitate message flow into different messaging systems and formats. While Exchange 2000 uses slightly different technologies than Exchange 5.x, both products can be configured to permit CAMEO 2.0 to access messages - both Internet and internal (desk-to-desk). CAMEO decodes the messages, performs a scan of message content against a list of "key words and phrases," and then forwards matches to a designated e-mail addresses.

CAMEO 2.0 features:

- Works with Exchange 5.5 or Exchange 2000.
- The CAMEO 2.0 application can run from any Windows NT or 2000 workstation.
- Scan Internet e-mail. Matched messages are allowed to pass, but are copied to any address for review.
- Scan internal (desk-to-desk) e-mail! Over 70% of a typical company's e-mail is internal.
- Take direct control over e-mail already delivered! Search through any or all mailboxes looking for messages that match content you specify. Matched messages can be deleted (without user knowledge) or copied for review!
- Enormous search capability. Over 200 words or phrases can be defined and searched for simultaneously!
- Specify parts of the messages to be scanned! Scan subject line & address fields as well as message body.
- Incoming & outgoing Internet messages or both incoming and outgoing Internet and Internal (desk-to-desk) messages can be scanned.

- Scanned Internet messages can be either automatically deleted or moved after processing.
- Uses advanced array search technology for enterprise-level performance.
- Convenient QuickStart helps you get going in under 20 minutes.
- Entirely workstation-based; no part of CAMEO needs to reside on your Exchange Server.
- A simple check-box can be selected to scan for common profanity.
- Status reports are mailed to a designated e-mail recipient that informs of system statistics including total messages scanned, matches found, and other key information.
- When a match is found, the entire message including attachments is forwarded to any designated e-mail recipient.
- Every message match can be forwarded to a unique individual for review and action.
- Ability to process messages as they are sent.
- Can process hundreds of messages per minute.
- Simple user interface allows for rapid setup and configuration.
- Can run continuously, waiting for new messages to be scanned.
- Dolphin Safe.
